INSTRUCTION MANUAL BExCBG05-05D-P **Combined Beacon/ Beacon** ATEX/IECEX & UKEX Gas & Dust

BExCBG05-05D-P

1. Product Table

Nominal Input Voltage	Chamber Beacon Nominal Input Current	Cover Beacon Nominal Input Current	Max I/P Voltage
12Vdc	750mA	750mA	14V
24Vdc	300mA	300mA	28V
48Vdc	180mA	180mA	54V
115Vac	140mA	140mA	126V
230Vac	55mA	55mA	253V
	Input Voltage 12Vdc 24Vdc 48Vdc 115Vac	Nominal Input Voltage 12Vdc 750mA 24Vdc 300mA 48Vdc 180mA 115Vac 140mA	Nominal Input Voltage Beacon Nominal Input Current Cover Beacon Nominal Input Current 12Vdc 750mA 750mA 24Vdc 300mA 300mA 48Vdc 180mA 180mA 115Vac 140mA 140mA

The table shows the input current taken by the various units.

Nominal current at nominal voltage.

Table 1: Electrical Ratings.

It is important that a suitable power supply is used to run the equipment. The power supply selected must have the necessary capacity to provide the input current to all of the units.

The above table shows the input current taken by the various units and shows the maximum voltage at which they can be operated:

The input current will vary according to the voltage input level an flash rates selected.

2. Warnings

- DO NOT OPEN WHEN AN EXPLOSIVE ATMOSPHERE IS PRESENT
- DO NOT OPEN WHEN ENERGIZED
- POTENTIAL ELECTROSTATIC CHARGING HAZARD CLEAN ONLY WITH A DAMP CLOTH
- **COVER BOLTS CLASS A4-80**
- USE HEAT RESISTING CABLES AND CABLE GLANDS (RATED 110°C) AT AMB. TEMPERATURES OVER 40°C

3. Marking & Rating Information

The BExCBG05-05D-P Alarm Horns comply with the following standards for hazardous locations:

3.1 ATEX / IECEx & UKEx Ratings

Standards					
EN60079-0:2018/	(ed.7):	Explosive			
Atmospheres - Equipment General Requirements.					
EN60079-1:2014/IEC60079-1:2014 (ed.7): Explo			Explosive		
Atmospheres - Equipment Protection by Flameproof Enclosures "d".					
EN60079-31:2014/IEC60079-31:2013 (ed.2): Explosive Atmospheres - Equipment Dust Ignition Protection by enclosure "t".					
Model No:	F	Rating

CE Marking and Notified Body No.

UKCA Marking and Approval Body No.

4. Zones, Gas Group, Category and **Temperature Classification**

The units can be installed in locations with the following conditions:

Area Classification Gas				
Zone 1	Explosive gas air mixture likely to occur in normal operation.			
Zone 2	Explosive gas air mixture not likely to occur in normal operation, and if it does, it will only exist for a short time.			
	Gas Groupings			
Group IIA	Propane			
Group IIB	Ethylene			
Group IIC	Hydrogen & Acetylene			
Temperature Classification for Gas Applications				
T1	450° C			
T2	300° C			
T3	200° C			
T4	135° C			
Area Classification Dust				
Zone 21	Explosive dust air mixture likely to occur in normal operation.			
Zone 22	Explosive dust air mixture not likely to occur in normal operation, and if it does, it will only exist for a short time.			
	Dust Groupings			
Group IIIA	Combustible Dusts			
Group IIIB	Non-Conductive Dusts			
Group IIIC	Conductive Dusts			
	Equipment Category			
2G, 2D				
	Equipment Protection Level			
Gb, Db,				
Maximu	m Surface Temperature for Dust Applications			
	115°C at +55°C 130°C at +70°C			
	Ambient Temperature Range			
	C Gas Groups IIA and IIB C Dust Groups IIIA, IIIB and IIIC			
	IP Rating			
IP66/67 to EN/ IP6X to EN/IE0	IEC60529 and C60079-0, EN/IEC60079-31			
The unit must	t only be installed by suitably qualified personnel in			

The unit must only be installed by suitably qualified pe accordance with the latest issues of the relevant standards:

EN60079-14 / IEC60079-14: Explosive atmospheres - Electrical installations design, selection and erection EN60079-10-1 / IEC60079-10-1: Explosive atmospheres Classification of areas. Explosive gas atmospheres EN60079-10-2 / IEC60079-10-2: Explosive atmospheres Classification of areas. Explosive dust atmospheres

The installation of the unit must also be in accordance with any local codes that may apply and should only be carried out by a competent electrical engineer who has the necessary training.

5. Special Conditions for Safe Use

Repair of the flamepath / flameproof joints is not permitted.

The enclosure is non-conducting and may generate an ignition-capable level of electrostatic charges under certain extreme conditions (such as high-pressure steam). The user should ensure that the equipment is not installed in a location where it may be subjected to external conditions that might cause a build-up of electrostatic charges on non-conducting surfaces.

Additionally, cleaning of the equipment should be done only with a damp cloth.

6. Product Mounting and Access

The location of the unit should be made with due regard to the area over which the warning signal must be visible. They should only be fixed to services that can carry the weight of the unit.

The BEx combined sounder beacon should be secured to any flat surface using at least two of the three 7mm fixing holes on the stainless steel U shaped mounting bracket. See Figure 1. The required angle can be achieved by loosening the two large bracket screws in the side of the unit, which allow adjustment of the sounder in steps of 18°. On completion of the installation then two large bracket adjustment screws on the side of the unit must be fully tightened to ensure that the unit cannot move in service.

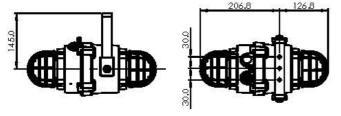

Fig. 1 Fixing Location for Combined Beacon/Beacon

7. Access to the Flameproof Enclosure

Warning – High voltage may be present, risk of electric shock. DO NOT open when energised, disconnect power before opening.

Warning – Hot surfaces. External surfaces and internal components may be hot after operation, take care when handling the equipment.

To access the Ex d chamber, remove the four M6 hexagon socket head screws and withdraw the flameproof cover taking extreme care not to damage the flameproof joints in the process. M6 cover screws are Class A4-80 stainless steel and only screws of this category can be used for the enclosure.

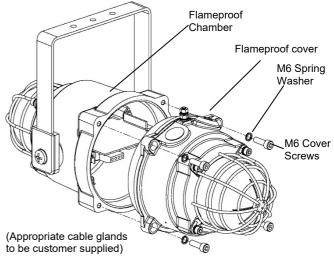

Fig. 2 Accessing the Explosion proof Enclosure.

On completion of the installation, the flameproof joints should be inspected to ensure that they are clean and that they have not been damaged during installation.

Check that the earth bonding wire between the two castings is secure and the 'O' ring seal is in place. When replacing the flameproof cover casting ensure that it is square with the flameproof chamber casting before inserting. Carefully push the cover in place allowing time for the air to be expelled. Only after the cover is fully in place should the four M6 Stainless Steel A4-80 cover bolts and their spring washer be inserted and tightened down. If the cover jams while it is being inserted, carefully remove it and try again. Never use the cover bolts to force the cover into position.

8. Selection of Cable. Cable Glands, Blanking **Elements & Adapters**

When selecting the cable size, consideration must be given to the input current that each unit draws (see table above), the number of sounders on the line and the length of the cable runs. The cable size selected must have the necessary capacity to provide the input current to all of the sounders connected to the line.

For ambient temperatures over +40°C the cable entry temperature may exceed +70°C and therefore suitable heat resisting cables and cable glands must be used, with a rated service temperature of at least 110°C

The dual cable gland entries have an M20 x 1.5 entry thread. To maintain the ingress protection rating and mode of protection, the cable entries must be fitted with suitably rated ATEX / IECEx or UKEx certified cable glands and/or suitably rated ATEX / IECEx or UKEx certified blanking devices during installation according to EN / IEC60079-14.

If a high IP (Ingress Protection) rating is required then a suitable sealing washer must be fitted under the cable glands or blanking plugs.

For use in explosive dust atmospheres, a minimum ingress protection rating of IP6X must be maintained.

The BEx combined sounder/beacon range can be supplied with the following types of adapters:

M20 to 1/2" NPT M20 to 3/4" NPT M20 to M25

It is important to note that stopping plugs cannot be fitted onto adapters, only directly onto the M20 entries.

Any other adapters used must be suitably rated and ATEX / IECEx or UKEx certified adapters.

9. Earthing

Both AC and DC sounder units must be connected to an earth. The units are provided with internal and external earth terminals which are both located on the terminal chamber section of the unit.

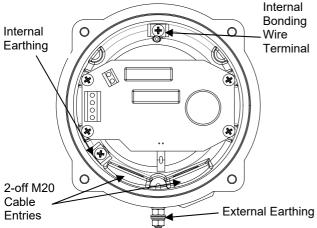

Fig. 3 Internal View of Cover

When using the internal earth terminal ensure that the stainless steel M4 flat washer is between the incoming earth wire and the enclosure.

Internal earthing connections should be made to the Internal Earth terminal in the base of the housing using a ring crimp

terminal to secure the earth conductor under the earth clamp. The earth conductor should be at least equal in size and rating to the incoming power conductors. Tighten M4 Earth screw to

External earthing connections should be made to the M5 earth stud, using a ring crimp terminal to secure the earth conductor to the earth stud. The external earth conductor should be at least 4mm² in size. Tighten the Earth nut to 3Nm. Please firmly tighten the external grounding terminal so that the stud does not become loose and lay the ground wire so that it is not caught by twisting and sagging.

10. Cable Connections

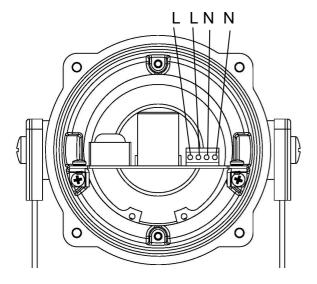

Electrical connections are to be made into the terminal blocks on the PCBA located in the flameproof enclosure. See section 7 of this manual for access to the flameproof enclosure.

Wires having a cross sectional area between 0.5 mm² to 2.5mm² can be connected to each terminal way. If an input and output wire is required the 2-off Live/Neutral or +/- terminals can be used. If fitting 2-off wires to one terminal way the sum of the 2-off wires must be a maximum cross sectional area of 2.5mm². Strip wires to 8mm. Wires may also be fitted using ferrules. Terminal screws need to be tightened down with a tightening torque of 0.45 Nm / 5 Lb-in. When connecting wires to the terminals great care should be taken to dress the wires so that when the cover is inserted into the chamber the wires do not exert excess pressure on the terminal blocks. This is particularly important when using cables with large cross sectional areas such as 2.5mm².

European Safety Systems Ltd. Impress House, Mansell Road, Acton, London W3 7QH 12-09-2022

11. AC Wiring

A 4-way terminal block is provided on the AC chamber beacon for power. There are 2-off Live and 2-off Neutral terminals in total. A 4-way terminal block is provided on the AC cover beacon for power. There are 2-off Live and 2-off Neutral terminals in total.

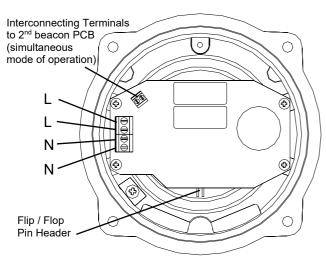

Fig. 4b Cover AC Terminals

12 DC Wiring

A 4-way terminal block is provided on the DC chamber beacon for power. There are 2-off +ve and 2-off -ve terminals in total. A 4-way terminal block is provided on the AC cover beacon for power. There are 2-off +ve and 2-off -ve terminals in total.

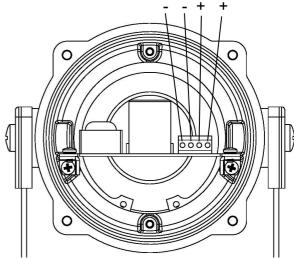

Fig. 5a Chamber DC Terminals

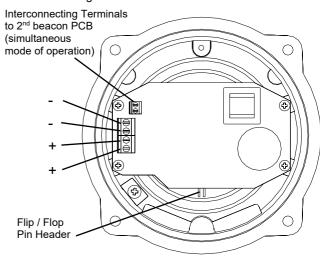

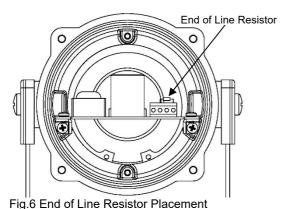

Fig. 5b Cover DC Terminals

12.1 **Line Monitoring**

On BExCBG05-05D-P DC units, dc reverse line monitoring can be used if required. All DC beacons have a blocking diode fitted in their supply input lines. An end of line monitoring diode or an end of line monitoring resistor can be connected across the +ve and -ve terminals. If an end of line resistor is used it must have a minimum resistance value of $3k3\Omega$ and a minimum power rating of 0.5 watts or a minimum resistance value of 500Ω and a minimum power rating of 2 watts.

The resistor must be connected directly across the +ve and ve terminals as shown in the following drawing. The resistor leads should be kept as short as possible.

13 Wiring the combined beacon/beacon for simultaneous operation

Both beacon sections can be wired to the same input supply so that they operate simultaneously or they can be wired to separate input supplies so they can be operated independently (see wiring diagrams D210-06-201 or D210-06-205).

If the chamber and cover sections are connected to the same input supply. The incoming cables should be connected to the input terminals on the cover section beacon board and the two link wires, that are supplied with the unit, should be used to link the supply from the interconnecting terminals on the cover section beacon board down to the supply terminals on the chamber section beacon board.

14 Settings

Synchronised Operation

All BExBG05D-P beacons that are connected to the same supply line will have a synchronised flash rate at one flash every second. To ensure that the units will be synchronised check that the pin header is not fitted, i.e. the two header pins are not shorted together (see Figure 7).

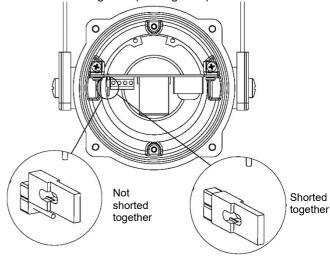

Fig. 7 Header Pin Settings

14.2 Flip/Flop Operation

Two units can be mounted close to each other to form a flipflop operation, where the beacons will flash alternately. To achieve this mode of operation, fit a pin header to the flip-flop header pins on the electronics board, i.e. the two header pins are shorted together, on one of the two beacons. The first flash on the beacon that has the header fitted will be delayed by 1/2 second. The two beacons will then flash alternately every 1/2 a second.

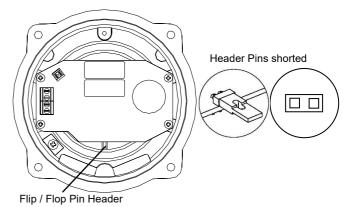

Fig. 8 Header Pin Settings

15 Interchangeable & Spare Parts

Warning – Hot surfaces. External surfaces and internal components may be hot after operation, take care when handling the equipment.

The beacon covers are interchangeable, contact E2S Ltd for a replacement cover available in various colours.

To change the cover, unscrew the M5 socket head screws and remove the M5 screws, M5 spring & flat washers.

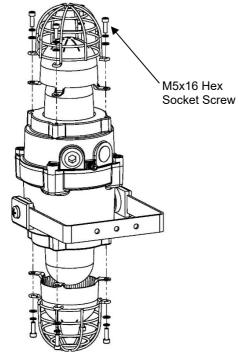

Fig. 9 Removal of cover

Remove the guard and replace the old cover with the new cover.

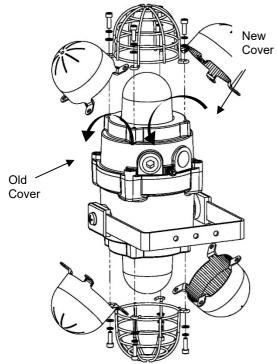

Fig. 10 Changing of cover

Fit the guard back on to the cover and casting, align the holes of the guard, cover and casting. To reattach the cover, the fixings MUST be in the order shown in figure 11.

Fig. 11 Cover and Guard Fixtures

16 Maintenance, Overhaul & Repair

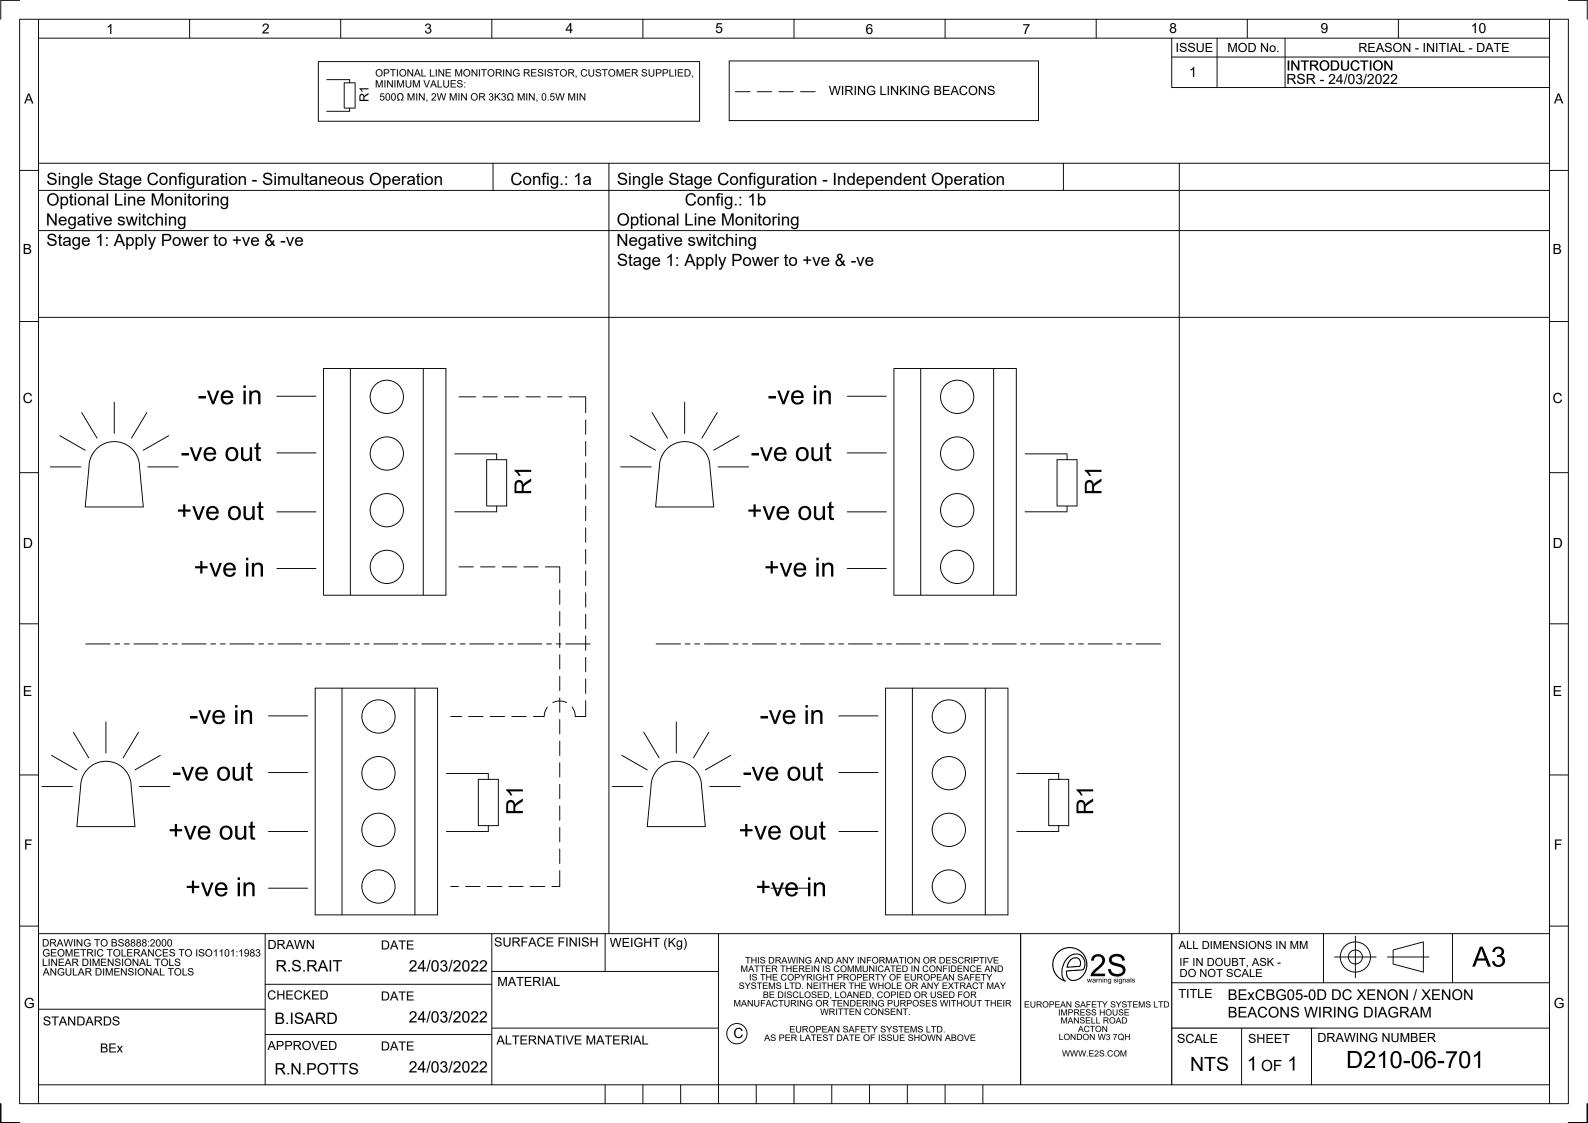

Maintenance, repair and overhaul of the equipment should only be carried out by suitably qualified personnel in accordance with the current relevant standards:

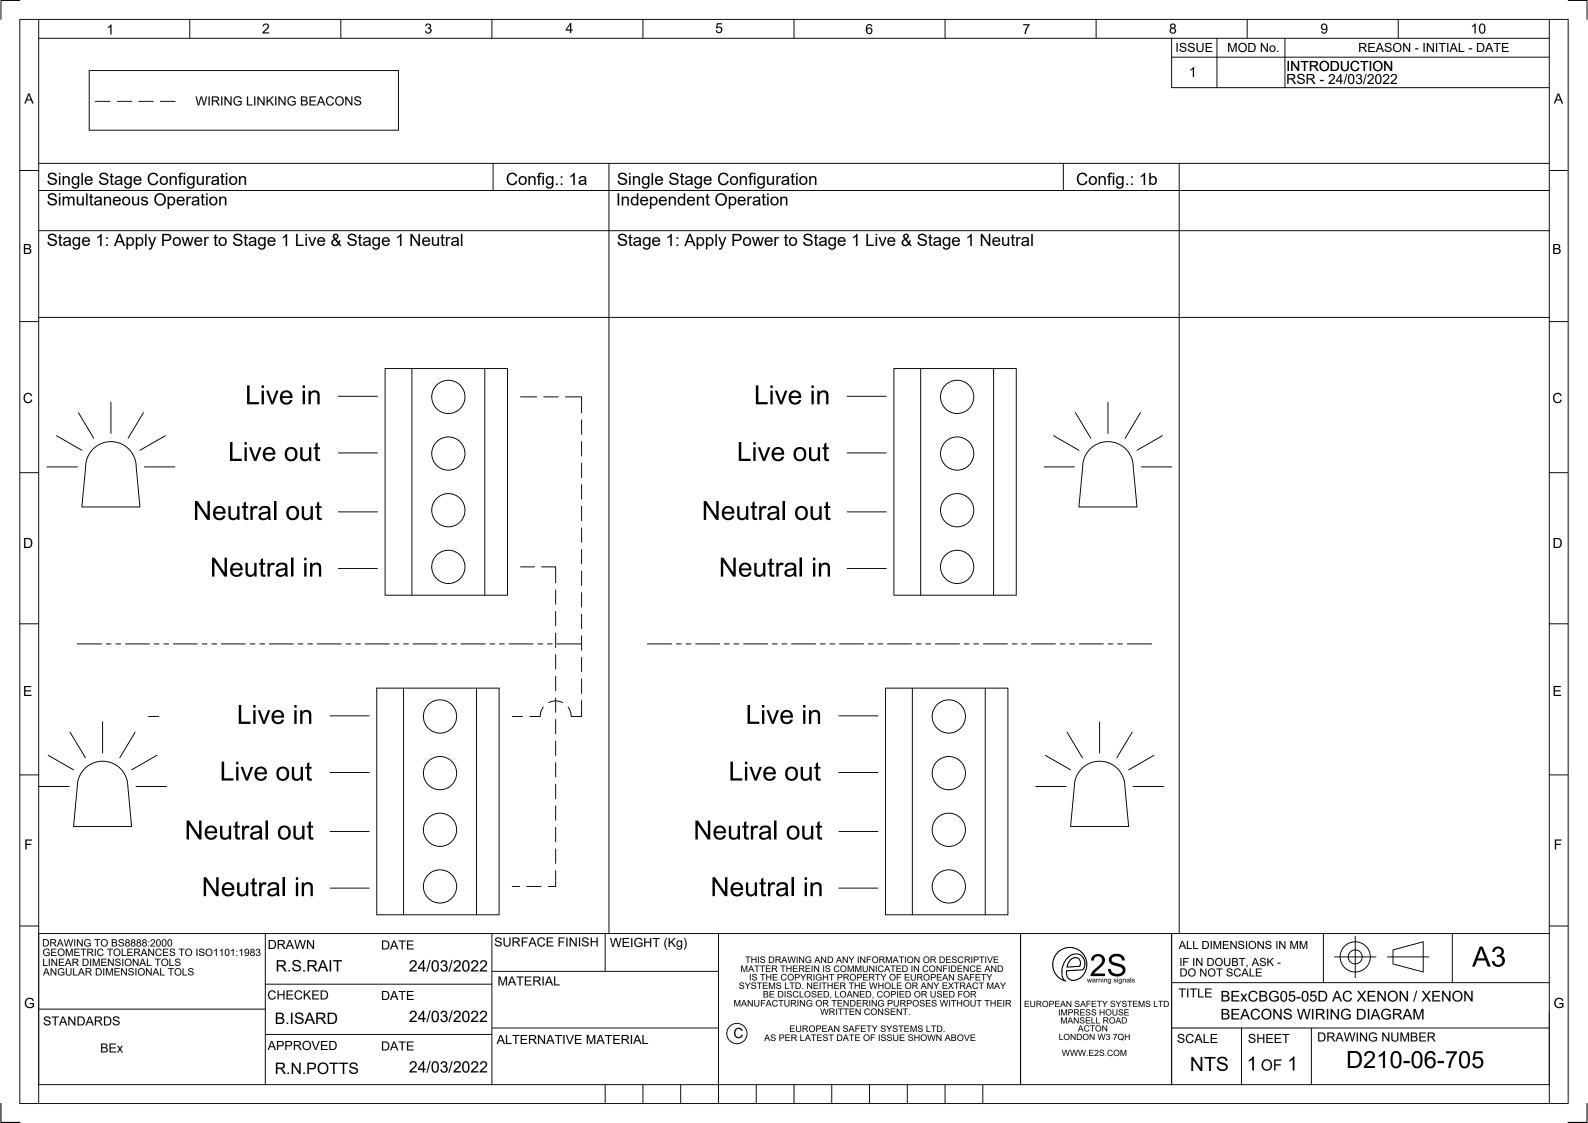

EN60079-19 IEC60079-19	Explosive atmospheres - Equipment repair, overhaul and reclamation
EN 60079-17 IEC60079-17	Explosive atmospheres - Electrical installations inspection and maintenance

The acoustic horn is made out of ABS plastic, therefore to avoid a possible ELECTROSTACTIC CHARGE the unit must only be cleaned with a damp cloth.

Units must not be opened while an explosive atmosphere is present.

If opening the unit during maintenance operations a clean environment must be maintained and any dust layer removed prior to opening the unit.
