INSTRUCTION MANUAL
Metal Housed Alarm Tone and Voice Annunciation Sounder/Sounder Beacon Range.

1) Introduction

The Appello tone and speech annunciation sounder has three different styles in DC.

- D105AX   Sounder
- DL105AXX   Sounder Beacon (Xenon)
- DL105AXH   Sounder Beacon (LED)

These Sounder units share a common set of functions:-

- 4 stages, each stage can record up to 30 seconds of CD quality audio.
- Facility to record via an on board microphone or a line in input.
- The recorded message can be played back proceeded either with or without the choice of one of forty five tones.

The Beacon functions are either:-

- Xenon Strobe:
  - o 1Hz flash rate
  - o 1.5Hz flash rate
  - o Double strike flash pattern
- LED:
  - o Steady
  - o 2Hz flash rate

2) Operating and Marking

All units have the following operating requirements and limitations.

Unit Type No.	Sounder only outputs Voltage	Range	Current
D105AX	24Vdc	10-30Vdc	256mA
	Max Current 256mA @ 30Vdc		

DL105AXX & DL105AXH sounder beacon units - Add selected sounder & beacon currents to calculate total current required.

| Unit Type No.	Beacon only outputs Voltage	Range	Current
Xenon Beacon	12Vdc	10-14Vdc	500mA
	24Vdc	20-28Vdc	250mA
LED Beacon	24Vdc	10-30Vdc	157mA
	Max Current 166mA @ 30Vdc		

Operating Temp: -25 to +55°C
IP Rating: Type 4 / 4X / 3R / 13 , IP66

Marking:

3) Installation & Wiring Requirements

D105AX

DL105AXX & DL105AXH

Always de-energize unit before removing cover.
The installation of the units must be in accordance with any local codes that may apply and should only be carried out by a competent trained electrical engineer.
The power terminals on the control unit are clearly marked and will accept up to 1.5mm^2 cable.

DC Terminals
On main PCB.
++ = Positive
- - = Negative

S4   S3   S2   + +   - -

The DL105AXX & DL105AXH units will have the beacon already prewired to the unit so no extra wiring is required.

4) Beacon Set-up

The beacon unit may need to be configured dependant on the type of flash required.

The xenon beacon is set as standard to 1Hz flash rate mode but it can be set to either 1.5Hz flash rate or double Strike flash pattern modes also. To alter the settings, change the position of the header pin as shown:

- Keep header on pins deignated 'A' for 1Hz flash rate mode
- Place header on pins designated 'B' for 1.5Hz flash rate mode
- Place header on pins designated 'C' for double strike flash pattern mode

DL105AXX
Header Pin settings
for flashing modes
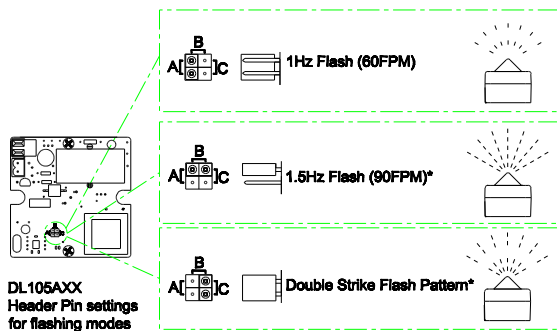

The LED beacon is set as standard to the 2Hz flash mode but it can be set to a steady on mode also. To alter the settings, change the position of the header pin as shown.

- Remove header for steady mode.
- Keep header in standard position for 2Hz flashing mode

DL105AXH
Header Pin settings
for steady and
flashing modes
5) Unit Set-up and Recording

The unit will need to be configured to suit the end user.
If recording either via the onboard microphone or the in-line connector the unit will need to be supplied with power.
DC units can be powered when completing recording and set-up.

See section 7) Appello Setup Guide overleaf for Set-up instructions and functions.
6) Tone Selection Table

The Appello unit has 45 different tones (See Table 1) that can be selected for the first stage alarm. The systems can then be switched to sound second, third and fourth stage alarm tones. The tones are selected by operation of a DIP switch S4 on the main PCB.

The tone table (Table 1) shows the switch positions for the 45 tones and which tones are available for the second third and fourth stages.

Example

**S4 Dip Switch -**
Shown Set for Tone 1
(All switches OFF)

To sound stage one simply connect the supply voltage (+ve and –ve), to the supply input terminals on the correct PCB shown.
Second, Third and Fourth Stage Selection

The Appello unit uses –ve switching to change the tone to the second, third and fourth stages.
Warning! : The negative supply must remain connected to the -(ve) terminal and a link made from this to the appropriate stage (S2) terminal otherwise the unit will be damaged.
To change to the second, third or fourth stage tone, link the -ve supply line to terminal relevant stage terminal. I.e. for Stage 2 link the -ve supply to the S2 terminal, for Stage 3 link the -ve supply to the S3 terminal etc.

7) Appello Setup Guide

The following guide is designed to get the user quickly interfacing with the Appello unit.

- **The Appello unit can be set-up to either play an attention seeking tone and then a recorded message or just play the recorded message.**

- **The user can:**
    - **Record on each of the 4 stages using either the Line In or Microphone inputs**
    - **Select the required alarm tone**
    - **Delete unwanted messages.**

- **To re-record a message on a particular stage, the previous message on that stage <u>must</u> be deleted first.**

- **Once the user has configured the unit, it must be put into it's Playback Mode and S2 switches set to stage 1, as shown in Quick Ref - Playback Mode (Stage 1 illustrated) guide below.**

- **The "Mass Erase" function will erase all the recorded stages.**

- ***<u>The "Mass Erase" can also be used to reset the unit if any functionality is lost.</u>***
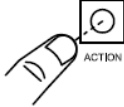

Quick ref - Switch 'S2' Dip Switch Function Settings

| Switch No.	OFF Position Function		ON Position Function
1	Record Mode		Playback Mode
