*Rate at 1Hz

The table shows the input current taken by the various beacons.
A supply voltage variation of +/-10% outside the voltage range is permissible.
Nominal current at nominal voltage and 1Hz flash rate.
Max. rated current at worst case supply voltage and flash rate.

Table 1: Electrical Ratings.

Ensure the system power supply is capable of providing the maximum current required for all beacons. Review associated cable size, length and quantity of beacons on each circuit.

2) Warnings

- POTENTIAL ELECTROSTATIC CHARGING HAZARD.
 - DO NOT OPEN WHEN AN EXPLOSIVE ATMOSPHERE IS PRESENT.
 - ALL ENTRIES M20 X 1.5MM.
 - USE SUITABLE RATED CABLES AND CABLE GLANDS IF TEMPERATURE EXCEEDS AS PER STANDARDS INDICATIONS BELOW.
- FOR ATEX / IECEx STANDARDS:
70°C AT ENTRY OR 80°C AT BRANCHING POINT.
- FOR NEC / CEC STANDARDS:
60°C AT ENTRY OR 60°C AT BRANCHING POINT.

3) Marking & Rating Information

All units have a rating label, which carries the following important information:

- Unit Model.
- Voltage Range
- Nominal Voltage
- Max. Current

See Table 1 for electrical ratings of each Unit Model.

*SIL Suitable	

The certification approval has validated continuous use up to 38°C ambient and are for transient use up to 70°C ambient.

Installation must be carried out in compliance with the National Electric Code / Canadian Electric Code.

4) Zones, Gas Group, Category and Temperature Classification

The units can be installed in locations with the following conditions:

Area Classification	
Zone 1	Explosive gas air mixture likely to occur in normal operation.
Zone 2	Explosive gas air mixture not likely to occur in normal operation, and if it does, it will only exist for a short time.
Zone 21 (ATEX / IECEx only)	Explosive dust air mixture likely to occur in normal operation.
Zone 22 (ATEX / IECEx only)	Explosive dust air mixture not likely to occur in normal operation, and if it does, it will only exist for a short time.
Gas Groupings	
Group IIA	Propane
Group IIB	Ethylene
Group IIC	Hydrogen and Acetylene
Temperature Classification for Gas Applications	
T1	450°C
T2	300°C
T3	200°C (GNExB2X15AC & GNExB2X21AC up to 70°C ambient; GNExB2X21DC up to 60°C ambient)
T4	135°C (GNExB2X05AC, GNExB2X10DC, GNExB2X10AC & GNExB2X15DC up to 70°C ambient; GNExB2X15AC up to 65°C ambient; GNExB2X21DC up to 55°C ambient; GNExB2X21AC up to 60°C ambient)
T5	100°C (GNExB2X05DC up to 70°C ambient; GNExB2X05AC up to 55°C ambient; GNExB2X10DC up to 45°C ambient; GNExB2X10AC up to 40°C ambient)
T6	85°C ATEX / IECEx: GNExB2X05DC up to 60°C ambient, GNExB2X05AC up to 40°C ambient NEC / CEC: Up to 65°C ambient
Dust Groupings (ATEX / IECEx only)	
Group IIIA	Combustible Flyings
Group IIIB	Non-conductive Dust
Group IIIC	Conductive Dust
Maximum Surface Temperature for Dust Applications (ATEX / IECEx only)	
GNExB2X05DC	89°C
GNExB2X05AC	110°C
GNExB2X10DC	117°C
GNExB2X10AC	122°C
GNExB2X15DC	125 °C
GNExB2X15AC	134°C
GNExB2X21DC	135°C
GNExB2X21AC	138°C

Equipment Category
2G / 2D
Ambient Temperature Range
-50°C to +70°C
IP Rating
IP6X to EN/IEC60079-0 IP66 to EN60529

5) Special Conditions for Safe Use

Repair of the flame path / cemented joints is not permitted.

Figure 1: Flame Path.

The enclosure is non-conducting and may generate an ignition-capable level of electrostatic charges under certain extreme conditions. The user should ensure that the equipment is not installed in a location where it may be subjected to external conditions that might cause a build-up of electrostatic charges on non-conducting surfaces.

The stainless steel beacon guard is not earthed and may generate an ignition-capable level of electrostatic charges. It has a capacitance of 10pF according to EN/IEC60079-0, clause 7.5.

All entries must be fitted with a suitable seal at the interface with enclosure.

6) Product Mounting and Access

6.1. Location and Mounting

The location of the beacons should be made with due regard to the area over which the warning signal must be visible. They should only be fixed to services that can carry the weight of the unit.

The beacons should be securely bolted to a suitable surface using the 9.4mm diameter bolt holes in the base of the unit (see figure 2).

Figure 2: Fixing Location for B2 Beacon.

6.2. Access to the Flameproof Enclosure

In order to connect the electrical supply cables to the beacon it is necessary to remove the flameproof cover to gain access to the flameproof chamber. To access the Ex d chamber, loosen the M4 grub screw on the beacon cover. Open the enclosure by turning the beacon cover counterclockwise and remove the cover, taking extreme care not to damage the flameproof threads in the process (see figure 3).

Figure 3: Accessing the Explosion Proof Enclosure.

On completion of the installation the flameproof threaded joint should be inspected to ensure that they are clean and that they have not been damaged during installation.

Flameproof threaded joints are not intended to be repaired.

Ensure that the 'O' ring seal is in place and undamaged.

When fitting the flameproof cover ensure the thread is engaged correctly. Fully tighten the cover all the way, ensure no gap is visible between the cover and base of the beacon enclosure. Tighten the M4 grub screw.

7) Installation Requirements

7.1. Installation Standards Compliance

Attention: Disconnect from power source before installation or service to prevent electric shock.

The beacons must only be installed by suitably qualified personnel in accordance with the latest issues of the relevant standards.

ATEX / IECEx installation standards:

EN60079-14 / IEC60079-14: Explosive atmospheres - Electrical installations design, selection and erection.

EN60079-10-1 / IEC60079-10-1: Explosive atmospheres - Classification of areas. Explosive gas atmospheres.

EN60079-10-2 / IEC60079-10-2: Explosive atmospheres - Classification of areas. Explosive dust atmospheres.

NEC Class / Zone, CEC Class / Zone, and NEC & CEC Class / Division installation standards:

National Electrical Code, NFPA 70 or CSA 22.1 Canadian Electrical Code, Part I, Safety Standard for Electrical Installations, Section 32.

The installation of the units must also be in accordance with any local codes that may apply and should only be carried out by a competent electrical engineer who has the necessary training.

7.2. Cable Selection and Connections

When selecting the cable size, consideration must be given to the input current that each unit draws (see table 1), the number of beacons on the line and the length of the cable runs. The cable size selected must have the necessary capacity to provide the input current to all of the beacons connected to the line.

Electrical connections are to be made into the terminal blocks on the PCBA, using solid wire 0.5-4mm² / AWG 20-12 or stranded wire, sizes 0.5-2.5mm² / AWG 24-14. Wire insulation needs to be stripped 8mm. Wires may be fitted securely with crimped ferrules.

Figure 4: Wire Preparation.

Terminal screws need to be tightened down with a tightening torque of 0.45 Nm / 5 Lb-in. A 5-way terminal block is provided on the AC Beacon: 2-off Live, 2-off Neutral and 1-off Earth terminals in total. A 4-way terminal block is provided on the DC Beacon: 2-off +ve and 2-off -ve terminals.

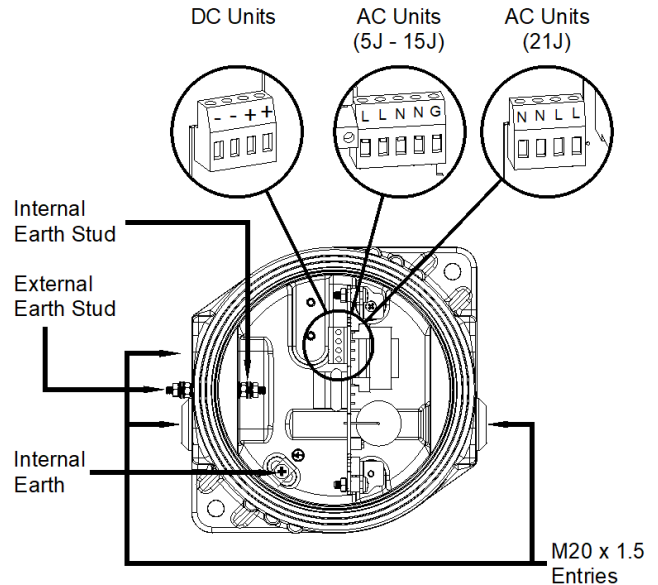

Figure 5: GNExB2 Entries and Terminal Block Location.

When connecting wires to the terminals great care should be taken to dress the wires so that when the cover is inserted into the chamber the wires do not exert excess pressure on the terminal blocks. This is particularly important when using cables with large cross-sectional areas such as 2.5mm².

Earthing

Internal earthing connections should be made to the Internal Earth terminal in the base of the housing using a ring crimp terminal to secure the earth conductor under the earth clamp. The earth conductor should be at least equal in size and rating to the incoming power conductors.

External earthing connections should be made to the M4 earth stud, using a ring crimp terminal to secure the earth conductor to the earth stud. The external earth conductor should be at least 4mm² in size.

7.3. Cable Glands, Blanking Elements & Adapters

For high ambient temperatures, the cable entry and the cable branching point temperatures may exceed the following temperatures:

- For ATEX / IECEx: 70°C at entry or 80°C at branching point.
- For NEC / CEC: 60°C at entry or 60°C at branching point.

Therefore, suitable heat resisting cables and cable glands must be used, with a rated service temperature at least as stated in the table below:

Model GNExB2	Max Ambient Temperature (°C)											
	15	20	25	30	35	40	45	50	55	60	65	70
ATEX / IECEx / NEC / CEC Approved												
X05DC								65	70	75	80	85
X05AC			63	68	73	78	83	88	93	98	103	108
X10DC				65	70	75	80	85	90	95	100	105
X10AC			64	69	74	79	84	89	94	99	104	109
ATEX / IECEx Approved												
X15DC			74	79	84	89	94	99	104	109	114	119
X15AC			74	79	84	89	94	99	104	109	114	119
X21DC	95	100	105	110	115	120	125	130	135	140		
X21AC			74	79	84	89	94	99	104	109	114	119

Table 2: Min. Ratings of Cables & Cable Glands.

Cable Glands

The cable gland entries have an M20 x 1.5 entry thread. Only use suitably rated and certified cable glands, as per type of approval, which must be suitable for the type of cable being used and also meet the requirements of the current flameproof installation standards (see section 7.1).

Blanking Plugs

When only one cable entry is used the other entries must be closed with suitably rated and certified blanking plugs as per type of approval.

Any unused cable entries must be closed with suitably rated and certified blanking plugs.

Ingress Protection

If a high IP (Ingress Protection) rating is required, then a suitable sealing washer must be fitted under the cable glands or blanking plugs.

A minimum ingress protection rating of IP6X must be maintained for installations in explosive dust atmospheres.

For use in Class I Division II locations, in order to maintain the db type protection, flameproof conduit seals and/or cable glands must be used.

Adapters

The GNEx Beacon Range can be supplied with the following types of adapters:

- M20 to ½" NPT
- M20 to ¾" NPT
- M20 to M25

It is important to note that stopping plugs cannot be fitted onto adapters, only directly onto the M20 entries.

Any other adapters used must be suitably rated as per the applicable standards.

If the installation is made using conduit, openings must have a sealing fitting connected as close as practical to the wall of

the enclosure, but in no case more than the size of the conduit or 50mm, whichever is the lesser.

8) Flash Pattern Settings

Warning – high-intensity light source. Avoid looking directly at the light source for extended periods of time.

The GNExB2 beacon can produce different flash patterns as shown in Table 3. The flash patterns are selected by operation of the flash setting DIP switch on the PCB, Fig 6.

Figure 6: DIP Switch Location.

Switch Setting	S1 Mode
00	1Hz (60FPM)
01	1.33Hz (80FPM)
10	1.5Hz (90FPM)
11	Double Flash

Table 3: Switch Positions for Flash Patterns

9) End of Line Monitoring (DC Units)

All DC units have a blocking diode fitted in their supply input lines. An end of line monitoring diode or an end of line monitoring resistor can be connected across the +ve and –ve terminals in the flameproof chamber. If an end of line resistor is used it must have a minimum resistance value of 3k3 ohms and a minimum wattage of 0.5W or a minimum resistance value of 500 ohms and a minimum wattage of 2W.

10) Interchangeable & Spare Parts

Warning – Hot surfaces. External surfaces and internal components may be hot after operation, take care when handling the equipment.

The beacon lens is interchangeable, contact European Safety Systems Ltd for a replacement lens available in various colours.

The guard is an integral part of the protection and must be reassembled exactly the same way as it was disassembled.

To change the lens, unscrew the M5 socket head screws and remove the M5 screws, M5 spring & flat washers.

11) Maintenance, Overhaul and Repair

Maintenance, repair and overhaul of the equipment should only be carried out by suitably qualified personnel in accordance with the current relevant standards:

EN60079-19/IEC60079-19 Explosive atmospheres -
Equipment repair, overhaul and reclamation

EN 60079-17/IEC60079-17 Explosive atmospheres -
Electrical installations inspection and maintenance

Units must not be opened while an explosive atmosphere is present.

Electrostatic charging hazard - Clean only with a damp cloth.

Figure 7: Removal of Lens.

Remove the guard and replace the old lens with the new lens.

Figure 8: Changing of Lens.

Fit the guard back on to the lens and casting, align the holes of the guard, lens and casting. To reattach the lens, the fixings MUST be in the order shown in figure 9.

Figure 9: Lens & Guard Fixings Order.
